

5) Information of All Time ~ Alternates ~ Information of Every Location in Space

Mea culpa, no other or institution is accountable for this student work. A Medium question: Is someone who has written much and published nothing an author, therefore, an authority? Nay, they be a student whose thoughts are theirs only.

Humanity perceives it has entered the information age. This perception is correct. It was foretold that when the promise Qā'im came, that all of knowledge up to that time would be the equivalent of 2 letters, the Qā'im would bring other 26 letters of knowledge. The Arabic alphabet has 28 (29 with hamza) letters.

So the information age is here. The other 26 letters are unfolding since. On May 23, 1844, the Báb, the Gate, declared Himself to his first believer, Mulla Husayn. That is the date that the this new age, new revelation began. The day after, May 24, an event, a question, ancient to realm of science and physics was posed. Primal Will precedes as the First Cause that which it creates.

There's no doubt that Gutenberg gave us the most powerful nib for his time to write books page by page we had ever seen. But the practice of writing books with ink was known to us for several millennia. There are still those who attribute the information age to Gutenberg's printing press. We appreciate the obvious parallel.

The information age was signaled and signed on the other side of the world, on May 24, 1844, from the realm of science and physics, Samuel Morse tapped out the question, "What hath God wrought?", What hath the First Cause created? This ancient question was renewed, recreated by the Báb's revelation, the Manifestation as the Primal Will, the First Cause. That Logos created that question. This signaled to humanity the beginning of a new age. Logos precedes, creates, summons questions and permits answers. The Báb created the question, answered it by Logos, and six years later gave the ultimate seal of proof. <https://youtu.be/qTZvbZMsHtQ?si=apQ1QnL2d554Ty75>

Humanity is continuing to give its answers, although it may not perceive that information became a means of travel for us nor the destination it is taking us to. The question electromagnetic pulses by telegraph tapped out for us that day we are still struggling to realize the potency and purpose of the question. The answers we unfold are all permitted. You are an answer.

In this thesis the exploration of the impact of the separation of time and space in the expression of fields, the form of information fields, storage and distribution, throughout the universe and eternity is examined. What information? All things located in space. All events located in time.

That universal realities are contained in the particulars has been recognized by humanity throughout the ages. The poets Kabir and Rumí convey this perception, which has been validated, propagated in the revelation from Bahá'u'lláh.

Split the atoms heart, and lo, within it you'll find a sun. Rumí⇒Bahá'u'lláh⇒humanity⇒to our children.

The atomic bomb is the most simplistic basic literal interpretation of this. The metaphorical realities it can unfold in your life, your understanding, and your journey is much more substantial. The spiritual metaphorical is always greater than literal, material, physical wealth or meaning.

Socrates was correct. He did not possess knowledge. He gave his knowledge to anyone who would except it. Knowledge is not a possession. Truth is not a possession. But in fact, the

Manifestations revealed the meaning of the truth by giving it to us in context of deeds, Who they are and what they are teaching us for this day, this dispensation. We thank the scholars, they remind us that content and context are both important factors of revelation and truth, in science and religion. So that we find truths spoken by the ancients. Their content is now in the context of the of our understanding today. Our understanding today is enfolded in the most recent divine revelation and in our most profound questions of science.

About every thousand years a Manifestation comes with a Rosetta Stone. Their writings are parallel of four different description realities simultaneously. They reveal in terms of things we can understand with the intellect, rational mind, by clear comparison as analogy. They convey in terms with things that we can understand with the heart, the unknown, the collective unconscious, by metaphor. They write in terms of things we understand with the spirit. Things that are in line with our intension of intention, that we recognize in their song where it is we are going with our lives as parable. They contain by example, words to deeds, in terms of relationals as the soul that allow us to see our relations to our creator, to ourselves, to all women and to all womb less men, to the Earth, to animals, to nature and its reflection as physics. They speak in sacred terms that we can understand, contain, by our tetrahedron being, mind, heart, spirit, soul.

Our purpose is to unfold the message for ourselves as a personal, shall we say encrypted, meaningful life from our Creator. To grasp the parallels of the four codes. As the poet, Patrick Joseph Quinn asked, "This world a school for ghosts?" YES.

The drop contains the ocean. ~Baha'u'llah

Thou dost consider thyself a puny form, when within thee, the universe is enfolded. ~Ali

The Manifestations will take our traditions, our religious books, our poetry, and relational understandings, and speak to us regarding the new vision. They are bringing in new themes and terms in context of our understanding. They bridge in new knowledge and understanding we did not previously have. They are revealing in terms that we can comprehend.

It's also necessary as we have new physics to speak in terms of the previous physics, so that we can see the relationship advancing into the new perspectives of physics, with perspectives of oneness. Those who have knowledge of physics need to help us bridge from the physics we understood to the physics we will understand. Yes, a new revelation to mankind can be perceived as disruptive, and those who are in

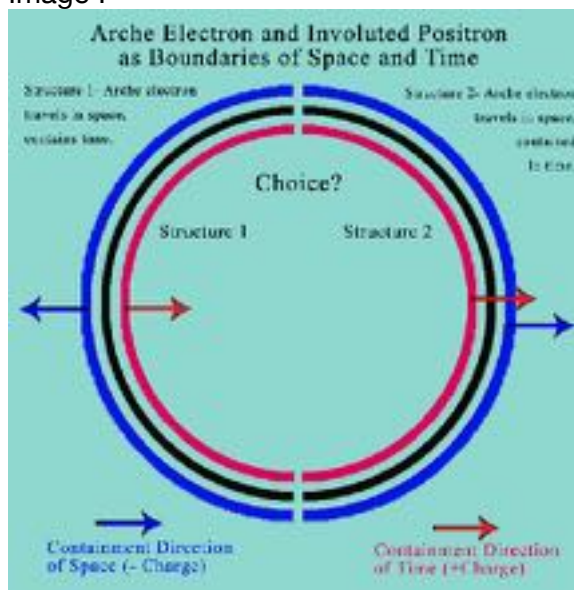

power sometimes perceive it as to disruptive. However, it is no more disruptive than a seed germinating. The seed of new ideas for physics will not germinate in inflexible stone.

There is an often repeated tradition that physics created mathematics, a rather pleasant idea. However, if you examine history and examine science and mathematics, you'll actually find that geometry created, mathematics. We see the origin from Pythagoras, his observations of geometry and the relationships from a point, to between point, a line, creating a circle and creating squares and rectangles and angles. Pythagoras identified himself as a philosopher. And with an open heart, you examine it, with an open mind as well, you'll find that the reality of mathematics came from One, The Primal point, prior to Pythagoras. It is a great wonder and mysterious beautiful statement, that Isaac Newton translated the Emerald Tablet from Latin to English. And then unfolded calculus. [Yes, with the reflected Gottfried (God Peace) Leibowitz.] Humanity has rational, objective, carved in stone, evidence that the Emerald Tablet has existed for at least 2500 years out in the open, on the outside, not in a crypt but known symbols. That is another paper:

9)Emerald Tablet ~ The Earliest Documentation.

The reality of the Arche electron and positron being a single reality, needs to be further explored. At this examination, there is two apparent possibilities of how the fields of time and space are bordered, boundaried, separated by the Alif boundary, electrical charge source and split reversal refraction, the Primal Will, the First Cause expressed as duality.

Image I

The boundaries on the right, structure 2, offer, an interesting configuration, allowing for the electron to be traveling through space, but contains time in a

field that has no space. And it follows that inverse involuted positron would have the reverse characteristics traveling in time contains space.

The "internal" electric field is shielded and contained by the boundary of Equilibrium, the conductor. See previous paper: **4)Containers of Space and Time.** The reverse charges are separated by the dielectric property, ascent (accent).

However, the left structure offers a much more interesting possibility. It offers a possibility that the electron is traveling in space, but contains time. Rather than being contained in time. And the positron on the other hand is traveling in time that contains space. One of the examinations of inertia should raise the question, "How does a mass know where it's going to go on a straight line?". It would seem the mass would need to know its location relationship to the everything in the universe to go on a straight line. So the left model offers a possibility that when the positron is traveling back in time, it actually has inside of it a map of the entire universe, all space reality contained within it. Therefore, as it travels through time, it knows, by first degree consciousness, where is the location it is, where it going to in space. And this lines up very nicely with Ali's statement, "Thou dost considered thyself a puny form, when within thee the universe is folded." The universe is folded within us, because the universe is folded within every positron traveling in time and eternity is folded in every electron traveling in space. That's beautiful. So following the advice of Dr. Paul Dirac, he said if you have an equation, that is beautiful, it is more likely to be true than one that is ugly. And trying to work through the right handed side of boundaries in the Image above, this student found problematic with a lot of not pretty complications.

Consultation with another student of physics, who sees the parallel to religion, would be helpful. It is possible the Alif boundary contains space and not time. That the inverted Arche electron, Arche Positron, travels in time because space is contained in a physical boundary as it is physical and the Arche positron travels in isolated time. Reflecting this off an alternate mind would give binary vision to see a better deeper meaning. Max Planck pointed out that work which advances physics sometimes is done in a lonely framework from a lonely point of view. True science, will advance more rapidly, by the process of consultation as revealed by Bahá'u'lláh. Solitary confinement to an extremely eclectic eccentric mental journey, the relation of physics and religion, can be disorienting like a sensory deprivation tank.

So this evolution is a journey, that John Archibald Wheeler invited us on by his observation that all bthe

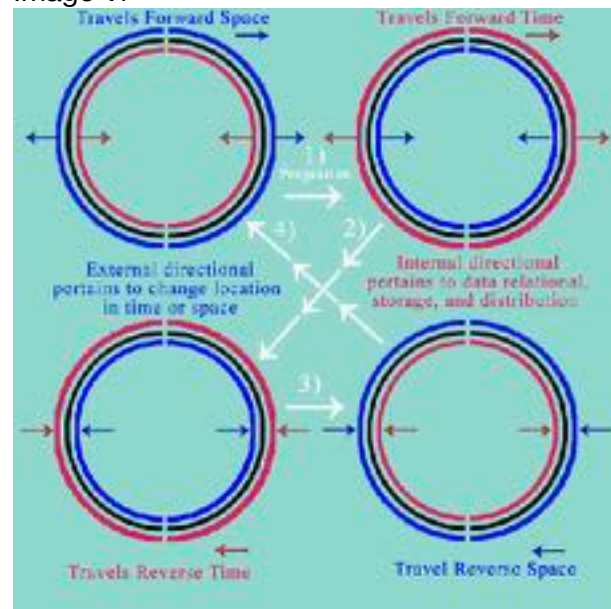

electrons are the same electron. The consideration that an Arche electron involutes to an Arche positron, travels in time back to the origin, the singularity, the Big bang. Then travels to another location in time and space occupies that place and then travels on to the end of time. The collapse of space and then returns back to the moment of now in any spatial location and does so for every moment and place.

Electron unto itself

Of course, it is possible that the Arche electron-positron entity travels to the past it loops around and comes back to now on a Möbius pathway to any point it chooses, as space is collapsed, and returns to the end on its other loop. As it comes again to now with a half twist, reflection at the boundary, G•D slide rule. We can perceive, with oneness, there are other true views. The three straight relations and one curved in *Taijitu* suggests the 1/2 twist of Möbius path was/is known.

Image VI

1) Now to the end of time. 1)⇒2)

2) End of time to now. 2)⇒3)

3) Now to beginning. 3)⇒4)

4) Begin to now. 4)⇒1/2 twist⇒1)

So this proposal of the electron involuting taking space around with it and ex-voluting the positron with time around it, seems outrageous violating all logic, fantastic, beyond imaginal. When a human being dies, their entire world around them folds up within and goes with them to another inner place, inner as not contained by space. And what unfolds after them is the time that allows the world to continue without them so says the wrings of the divine books clearly conveyed in Baha'i writings. Proof by math, $1-1=0$, electron⇌positron. If you

think that zero does not contain great meaning and value, you should examine humanity's math before we had zero. Proof by physics: every physicist in this age knows that zero contains great potential. There are those who calculated its energy. A classically trained logician would say that those analogies are not relevant or faithful. *True reason is purposeful meaningful association for the good.*

The positron unto itself

Entanglement: the selection of two electrons creates entanglement. Entanglement is the confirmation of relations. The reality It is what It is, a reflection of The One. THE as a primal universal article of language identifies singularity that is our subject of interest there by distinguishes it from all others. THE ONE. 1 is 1. Entanglement is merely a question of what causes the oneness of two electrons. The message of the Creator, the Playful, fans the deck of electrons and invites us pick an electron card, any card. Now pick another one. They are the same instantaneously. All is an expression of the One. Entanglement is the simple proof that John Archibald Wheeler gave us a small valid idea to move physics forward down the path of the purpose of physics, to know First Cause, our goal, Arche electron. So why can't there be three entangled electrons? Because there by we, distracted, miss the point. The Arche electron is one.

With a half twist of perception, we see the beginning in the end, cycles. Space and time are separate. Spooky action, eternal action synonymous. Space discontinuous to time; time continuous to space.

Why remain despondent when the Pure and Hidden One hath appeared unveiled amongst you? He Who is both the Beginning and the End, He Who is both Stillness and Motion, is now manifest before your eyes. Behold how, in this Day, the Beginning is reflected in the End, how out of Stillness Motion hath been engendered. This motion hath been generated by the potent energies which the words of the Almighty have released throughout the entire creation. Whoso hath been quickened by its vitalizing power, will find himself impelled to attain the court of the Beloved. ~Bahá'u'lláh

Conversation with Dr. Stephen Friberg, physicist, photonic decontamination specialist (cleans laser beam communication signals), provided this student with understanding the components of a laserbeam coupling device. Once that simple, yet complicated, structure is studied, it becomes apparent that the electron is of itself a light signal coupling device. Now perceived, the electron as a cavity in space, as space exists only exterior to it. Its inner walls as reflective mirror. The lack of space within the electron allows, its inner reality, the positron to accomplish mode matching (alignment of signal absorption to emission) by virtue of positron's surface boundary container of time. This enables the electron to absorb and emit light coherently when and where it is purposed, not unlike human conscious."

In this age, humanity is in a massive earthquake, as in Turkey and Syria was a smaller one. The collapse of a materialistic civilization will make room for a spiritual one, Koyaanisqatsi. Socrates gave the understanding of the One, the Universal. Aristotle's knowledge and perception of particulars is helpful in this school of life. A corrected sequence, purpose anterior to corporeal, Primary then the many, purpose then meaning, paradoxically first time, then the material space. Sequence matters for us to rationalize progress as sequence. Circular. How ever, the purpose of meaning of one was anterior to the symbol which was anterior to material object as symbol.

"The discerning man rejoiceth at the day of trials, his breast becometh dilated at the time of severe storms, his eyes become brightened when seeing the showers of rain and gusts of wind, whereby trees are uprooted; because he foreseeeth the

result and the end (of these trials); the leaves, blossoms and fruits (which follow this wintry storm); while the ignorant (short-sighted) person becometh troubled when he seethe a storm, is saddened when it raineth severely, is terrified by the thunder and trembleth at the surging of the waves which storm the shore."

'Abdu'l-Bahá, TAB v1, p. 12

Crushed beneath the blocks of ignorance and over choice, we will come to the end of materialic civilization, dead. We will choose to move on to the next life. Those not crushed will build new lives. We are all Turkey and Syria.

Oh way. I am the royal Falcon on the arm of the Almighty. I unfold the drooping wings of every broken bird and start it on its flight. ~Bahá'u'lláh

In the advanced civilization that is coming, human beings will focus, primarily on making the internal world more perfect instead of changing the external world to meet their comfort. We will move from exoteric physics to esoteric physics as our science.

Wikipedia, Pickett slide rule.

G•D Slide Rule, the right side of the scales continue again on the left side, in our minds. Cycles of continuity is a helpful perception all the same, ideals lead us on.

Circular slide rule manifests the still implied unreal continuity of a cycle. The implied pre and post

scales are constructs of meaning. A physical manifestation with an associated meaning.

The name of the company Concise is a beautiful poetic paradoxical expression. Con as with $\Leftrightarrow$ Cise as separated $\Rightarrow$ With Separation $\Leftrightarrow$ Essence of

Binary. Careful examination exposes that all of the scales on this artifact are aligned at one. They begin at one and end at one. This is beauty. There are two points of alignment that occur that are very manifest. The alignment at one as a reflection of the Creator Singularity, The other point of alignment is at zero, as in axis of EM wave, as in zero point energy, the center of the circular slide rule suggests that point of alignment at zero, the Primal Point. Bahá'u'lláh in Commentary on the Surah of Light hints at the magnitude of the zero zero, 00, 0² point, no-thing-ness, as Lam, the letter "L". Non-dimension by all scales. As demonstrated in a previous thesis, 00 point alignment of spin. There is a mysterious paradox that occurs at 00. When Einstein's ideas were aligned with Lorentz transformations by the alignment of zero point in time and zero point in space. That alignment allowed for two realities that normally could not be aligned, continuous time and discontinuous space, to be aligned to create mathematics for physics that we expound upon as 4 dimensional space time which is not a physical reality, an intellectual reality. An intellectual reality centered on 0 and 0, not 1 and 0.

Reality is binary, two points of alignment, 1 and 0. That humanity's accessed to knowledge is through the media of binary is essential not accidental, meaningful not random, purposeful.

So time "travel" occurs at the zero point as does meaning "travel" and purpose "travel". Those who travel as one self centered ego (which is nothing), by zero do not comprehend or reflect unity. Those who travel as nothing validated by the One reflect unity. There are those who travel to connect, to find the One in all; there are those to travel to section off a portion of what they desire. The explorers went to find the One. Historically we saw disunity in imperialism and colonialism who followed the explorers. They were not seeking the One. We can explore new meaning in physics eyes open. There are those who exploit and do not love knowledge for its connection to the One. Those eyes are focused on material and are interested in lesser conquests, how can physic, nature, give us personal power to create external changes. It is the purpose of our thoughts that will determine our understanding. We can realign our purpose or not.

Because the laws of physics at this point have not defined how fast an object can move through time, then John Archibald Wheeler's proposal is possible.

The laws of general relativity apply to velocity in 4 dimensional construct, time and space, a mental construct of space with time relation. Those laws do not not apply to velocity outside of time or outside of space. Just like Albert Einstein told us we may need to first use our free spirit imagination more than our math mind knowledge to understand these relationships, then translate them. Entanglement is outside the four dimensional construct inviting another model.

However, for consistency, if the positron is traveling back in time, how does it come forward in time to arrive at another location? This creates a bigger problem than ugliness. Systems like the souls demand integrity. This student would love to consult with another.

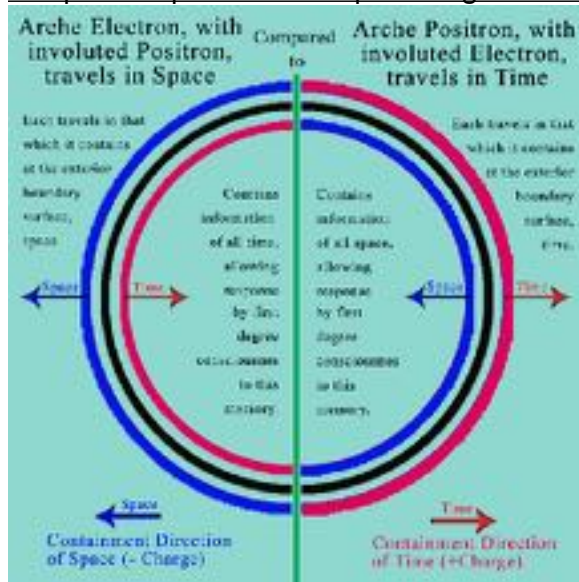

There was a Baha'i, Gordon Dobbins, who worked at General Dynamics as a problems analyst. Gordon is a genius. To talk with him again. He offered his slide rule to a high school student. So we must slide with an old rule, G•D Slide Rule in remembrance.

All-the-same, the Arche electron and Arche positron must follow the slide rule, 2π in time and additional 2π in space, addition single cycle to have integrity in this journey.

Image II

Interesting parallels to *Taijitu relations described in Wikipedia*

Wikipedia <https://en.m.wikipedia.org/wiki/Taijitu>

The sequence of relations matters. That is one of the essential characteristics that Primal Will unfolds in its manifestation as time.

Language, mathematics, and reason all conform to this command of Primal will. Sequencing has its power out of time as well. ~ These are the words I will obey ~ Are these the words I will obey ~ So time

and space revolving about each other has meaning? Rather, they are contained in meaning.

Just like Desi said to Lucy, "If you get pregnant before you know the father, you've got some 'splaining to do." So the Primal Will can get our attention by presenting a reality of physics out of any possible rational historical sequence. "He does what so ever He pleases." When Dr Paul Dirac was asked, "How did you find your equation?" He answered "I find it beautiful." He did not chose to do the 'splaining at that time.

This diagram indicates the flow sequence of the Arche electron-positron, a dipole spinning about itself, intrinsic spin. The flow progresses or functions as π , 180° intervals, the same as electromagnetic waves a described in **2)Truth $\leftrightarrow$ Light $\leftrightarrow$**

Consciousness. The first half spin on left side of the image the second $1/2$ spin on right as diagramed in Image III.

Image III is busy because reality is complicated. Hold on to the one fold and one time G•D Slide Rule or we all will certainly be lost. One life, one soul, give it your best shot.

Image III $0 \Rightarrow \pi$ left side, $\pi \Rightarrow 2\pi$ right.

Sequence 1) - 6) both charges both dimensions.

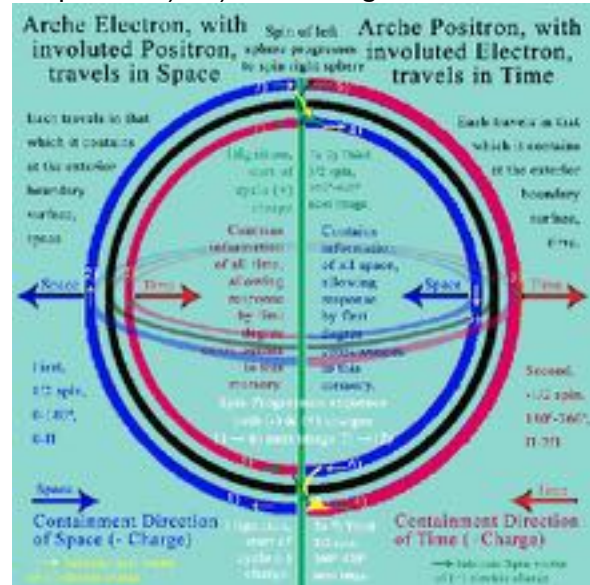

Image IV indicates the whole dipole particle sequence repeated from above for clarification. Small flow color coded vectors of spin are in Image III and Image V, large white flow vectors in Image IV which expresses overview continuity of Images III to VI.

Image IV

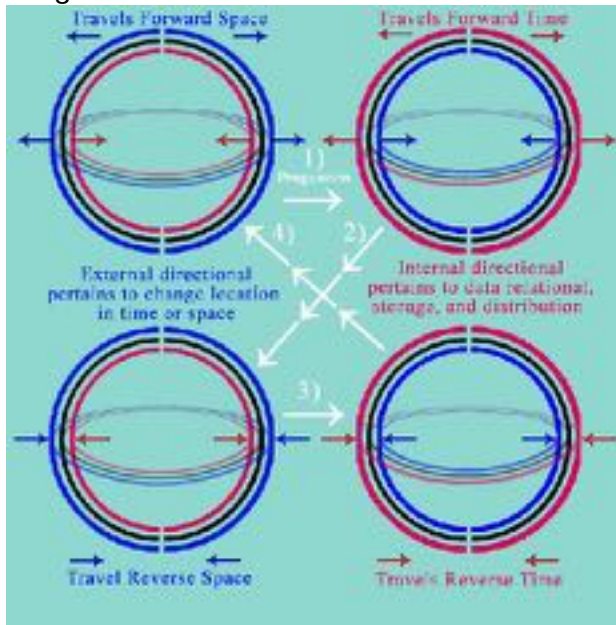

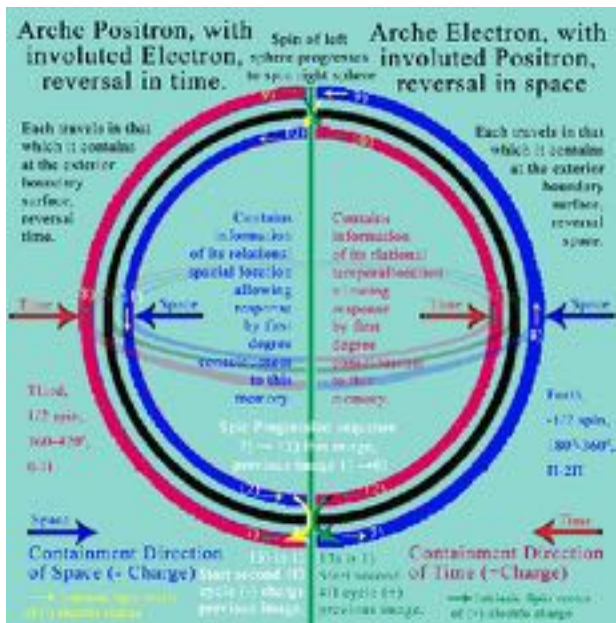

Image V $2\pi \Rightarrow 3/4\pi$ left side, $3/4\pi \Rightarrow 4\pi$ right.
Sequence 7) - 12) both charges both dimensions.

There is a Möbius 1/2 twist/ 180 turn about spin at the end of each 4π cycle. This marks the completion; we will do a 1/2 twist spin as we dive out of this world in to the next as well. The Möbius is an ancient concept of how unity can flip within itself to completeness of 4π . Inside becomes outside 4π .

Image VI

Aion, the god of eternity, is standing inside a celestial sphere decorated with zodiac signs, in between a green tree and a bare tree. Sitting in front of him is the mother-earth goddess, Tellus with her four children, who possibly represent the four seasons. 200-250 C.E. ~ Wikipedia (What synchronicity, Tellus as a name for mother earth, as in nature, as in physics, as in "Please physics, 'tell us' about the First Cause". Are things connected by the Primal Will or are you an accident?)

So the immediate logical problem with this structure, as an event, is an implication that space is discontinuous, not always manifest, and ... so is time? Time penetrates, permeates, space because it is continuous in relation to space, so as in image II time contains space at all times. The Alif boundary, a non physical boundary, contains time. This paradigm in images suggests time is not "always" present. Our perception suggests now is not always present. Past. Future. There is likely a system structure that time is available from other-same Arche Positron, by synchronicity, manifestations of the Arche electrons, a universe full of them. Ideally it only takes one time containing positron for continuity. However it would seem that since positrons are rare the event of synchronized time and synchronicity of Arche electrons is the norm. Furthermore, that all Arche electrons as a single reality contain space externally as Pascal hinted, the center is everywhere. This synthesizes a continuity of space as it is not in relation to time.

Primitivity is a characteristic of space as a field. Permeability is a characteristic of time as a field. There is a field characteristic between time and meaning, possibility. There is a field characteristic between meaning and purpose, constancy. These characteristics will require additional examination in other discussions.

So how does this help those who juggle qubits? Is the realization that each electron in the system of an ordinary computer in reality is a qubit. It moves from time to space 4π , each electron is entangled with its positron. Devising a system to use those states is the challenge. But the perception that the universe distributes knowledge to itself is necessary, because that the system of the universe has integrity, therefore, it has to be connected by instantaneous information transfer. Transfer of information in the relationship of time and space is limited by C . However, transfer in the realm of meaning and time is not limited by C since primitivity (ϵ_0) is not a factor. Primitivity is a regulating feature of space not meaning. The regulating feature of meaning to time is constancy (C_0).

This student met a yogi of Chinese ancestry. So reflecting some time on the Chinese yogis personhood as the Pride of his Father conveys much. In a conversation of reality it was conveyed that all physical things have frequency. By this student's understanding, the essential frequency of physical phenomenon is the inverting $\Rightarrow$ exverting $\Rightarrow$ of electron $\Rightarrow$ positron $\Rightarrow$. This yogi's practice manifested a constancy. What was eight hours of yoga daily became four hours of yoga daily. Interactions with the physical world and with the spirit world, a balance of and to relationships with others, a balance of inner world and outer world. He brought the practice into the middle way. It is constancy that is the essence of Alif. The boundary between space and time, *xī kùn yu shijǐān*. The yogi's words and deeds match as constancy as Good.

Erwin Schrödinger's work and equation indicates that all things have frequency. But examination of frequency is not merely cycles. Because nothing really re-occurs. There's only 4π of the full expression. One turn of a given quality aligned with the one full expression of another of a comparison quality. It is the binary relationship of interplay of two qualities that manifest as physical phenomenon synthesizing cycle. Then that thing never occurs again. The next apparent cycle is actually new and different. No Day is the same Day. No Second is the same. Second. In reality each second is its own beginning, all Primal. But the interaction that we call frequency the interplay between two aspects as Bahá'u'lláh describes the *active force and recipient*, that interaction that interplay occurs with all things. Whether it be the interplay of a particle and wave manifestation of electron and positron or the interplay of justice and mercy.

The relationships are hard for us to perceive in that positron occurs in time before the electron occurs in

space. The event of permeability provokes the event in the permittivity. There is a vector, but it's not time; purpose is the vector. As student physicists it is easier to see time as vectored than to see that in fact there's something much deeper more profound, causing the vector. Primal Will.

Positrons all containing time externally synthesize now to the common faculty, that our senses are and shall be in now. The eye goes to dust. We can transcend the "I" with the perspective of oneness, to see with the eyes of another in this life. We transcend the limitations what the physical eye sees by seeing with our one mind. We can transcend our one mind by seeing what the Manifestation sees. Binary choice with each step of understanding.

The alternate understanding of how time is discontinuous, is examined and supported in 11) Secondary Analysis of SSpace Derived from TimE. That is another thesis.

Alternate perspective synopsis:

1. Things, discontinuous in relation to space, space continuous in relation to things; things derived by space.
2. Space, discontinuous in relation to time, time continuous in relation to space; Space derived by time.
3. Time, discontinuous in relation to meaning, meaning continuous in relation to time; Time derived by meaning.
4. Meaning, discontinuous in relation to purpose, purpose continuous in relation to meaning; Meaning derived by purpose.
5. Purpose, discontinuous in relation to the One, the One continuous in relation to purpose. Purpose as Primal Will derived by the One. Mind, heart, spirit or soul can not fly in the realm of the One.

"The whole visible world is only an imperceptible atom in the ample bosom of nature. No idea approaches it. We may enlarge our conceptions beyond all imaginable space; we only produce atoms in comparison with the reality of things. It is an infinite sphere, the center of which is everywhere, the circumference nowhere. In short, it is the greatest sensible mark of the almighty power of God that imagination loses itself in that thought." Blaise Pascal

Perceiving time as the Primal Will and space as a derivative of the Primal Will is a stretch we can reach. Humanity's ancestors have been helping us for thousands of years. We sit on their shoulders and they hold us in their hearts, and help us not fall. We remember them.

Black hole simply stated is the balanced separation between time and space is naught. Event horizon concept horizon just planck size random uncertainty ideas radiate right, Dr Hawking?

So metaphor alert, transmutation to analogy, comparison. John Archibald Wheeler, staring into the abyss of his own conscious, recognized the essential name black hole. The relationship which he did not perceive was black hole's relationship to the sun. The relation on human conscious to divine conscious. The Sun emanates and manifests large volumes of Light and Truth, as does the Manifestation. The human being, human conscious as the black hole sucks in everything it can and the little bit of light that comes off of our conscious, that we think we understand, an event horizon produces writing such as these. So the concepts that goes down into these theses (plural thesis) are actually originating from the source of light the Manifestation, and what's being bounced at the conscious horizon is by the random Heisenberg quanta indeterminate light not being absorbed. Stephen Hawking's mathematics demonstrate how we bring our thoughts into the world which are almost as nothing compared to the Sun of Truth. Ours being vague non incidental except and unless the intention is to better the world.

The betterment of the world can be accomplished through pure and goodly deeds, through commendable and seemly conduct.
~Bahá'u'lláh

How do you increase the amount of valuable information that you can bring back to the world? Increasing the size of the black hole. This is what Socrates did when he says I know nothing, very big statement. That increased the surface area which his words radiated. Or you can do things for the betterment of the world, as service.

Dark matter? No response to EM wave. Unconscious matter. Not even the level of primary consciousness. Not inter-faced to time. Distorted gravitational space isolated? Not moving. No-thing within. Dark energy? The boundary between. Difficult question. Human intelligence, what is the limit? The boundary of collective unconscious.

Physicists as physics sometimes says things that does not understand itself. Accepted physics states of the universe expanding from the Big Bang event. But physics actually does not understand that the particles are expanding. Space is infinite and is not expanding. It has a Space is physical and is infinite in relation to particles. So the particles of the universe as a singularity has a boundary as it expands or contracts. That's not what's happening

with space. This is because that space is a derivative of time. It is discontinuous in relation to time, but continuous in relation to particles it is continuous.

And in this age, at this time we can realize how that information can be stored, distributed, replicated, and accessed through a variety of mediums, such as electromagnetic waves, chemical storage systems, magnetic fields, even electrons themselves and new the elusive qubit. The latest developments towards a quantum computer are using laser selected single atoms. So the proposals in this writing are certainly not outrageous. That there already exists a system of information storage distribution, collection, that is the underlying structure of the physical universe itself is rational. All of this exploration is an effort to understand gravity, love.

The interplay between Socrates and Aristotle is parallel to the interplay between time and space, continuous and discontinuous, universal and particular, the ideals and the substance. They require each other's perspective as long as our awareness is associated with the body. In the stage that follows, we will depend upon the interplay between meaning and purpose. This classroom has a critical essential question: Who is your teacher?

Next thesis: **6)The gravity of time, The gravity of space, Motion manifests gravity.**

Elderly Baha'i student
Clyde Artur Keys

(29 with Hamza) historically Hamza was the uncle of Mohammed, who was the letter hidden in the desert. It was Hamza, whose presence allowed much of Muhammad Revelation to unfold in that H_MZ_ became the protector. H'MZ', whose spirit was created by his constant presence and roaming in the nothingness of the desert. H...MZ... as a component of the detached letters of the Quran; H*MZ*, the space between the detached letters. Hamza is like an apostrophe, an asterix, a__space. It is a mark, indicating that there is information that is not a parent on the page. Later, the significance of Hamza was expressed by the 12th Imam, **al-Mahdī**, who was hidden in the desert. Approximately, 1000 years later, the Báb identified himself as the 12th Imam the hidden aspect. Hamza is similar to every phonic symbol that is indicating a sound on the written page. In fact, there is no sound on the page, but the phonic symbol carries meaning that there is hidden information there. Hamza is very similar to the magnetic permeability property of time a quantity we cannot measure, but we know it exists because it is necessary for physical reality to unfold. So therefore, each of the detached letters has space, an unwritten Hamza between, the hidden aspect, the conveys more meaning between.

EverywordyoureadhasaHamzabetweenotherwise you wouldnoteasilyunderstandthewordsifitwascontinuous letters.

Stephen Lambden conveys the importance of the hamza that is an aspect of the Greatest Name.

A Tetragram of Sacred Letters - The Word Baha' :

B ب + **H** ه + **A** ا + ' ' (hamza)

- [1] the first letter B (ب),
- [2] the second letter H (ه),
- [3] the third letter A (ا), followed by
- [4] the fourth element, which is the hamza (همزة = هَمْزَة), is not exactly one of the 28 letters of the Arabic alphabet, though one fundamental to certain of them as a glottal stop.
